

Cloud Computing Fundamentals

Faculty: Dr. Govindasamy C
Course: Cloud Computing and Big Data Analytics
Course Code: CSMS14

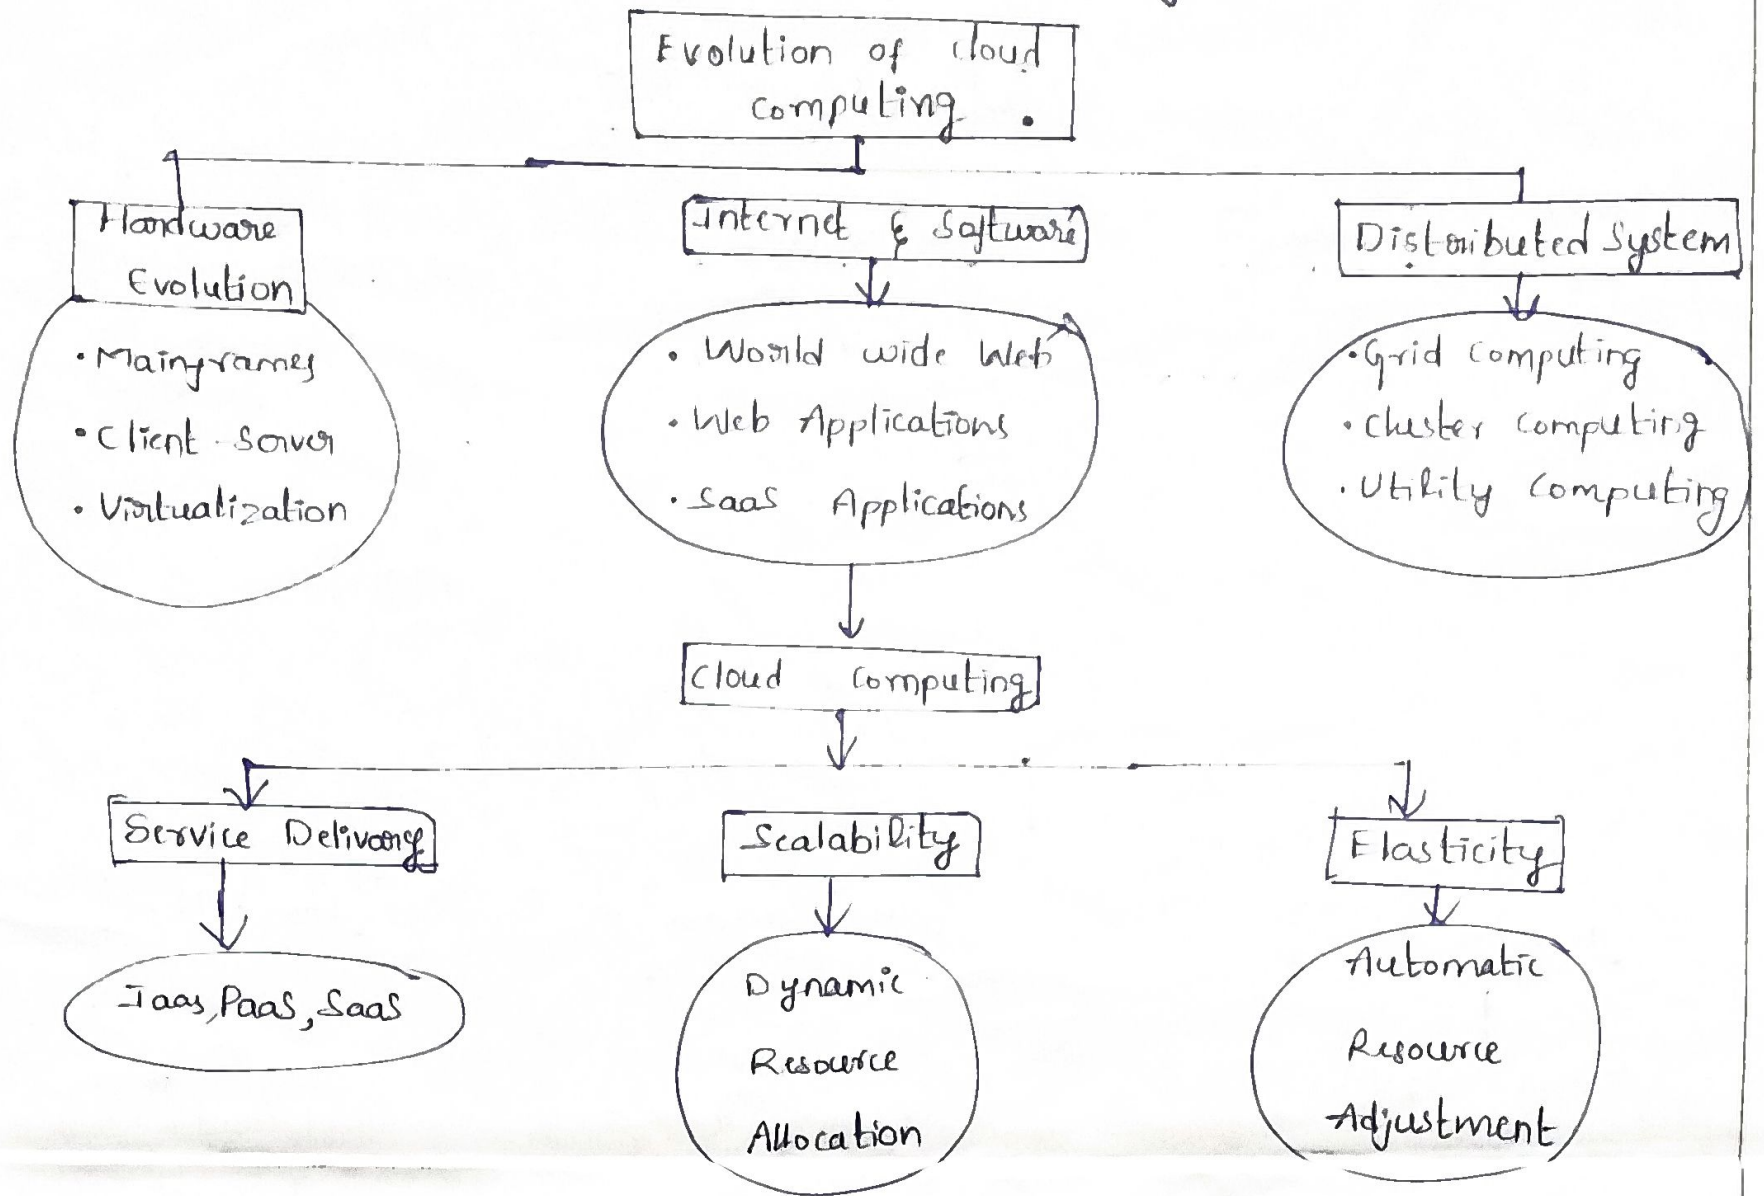

Concept Mapping

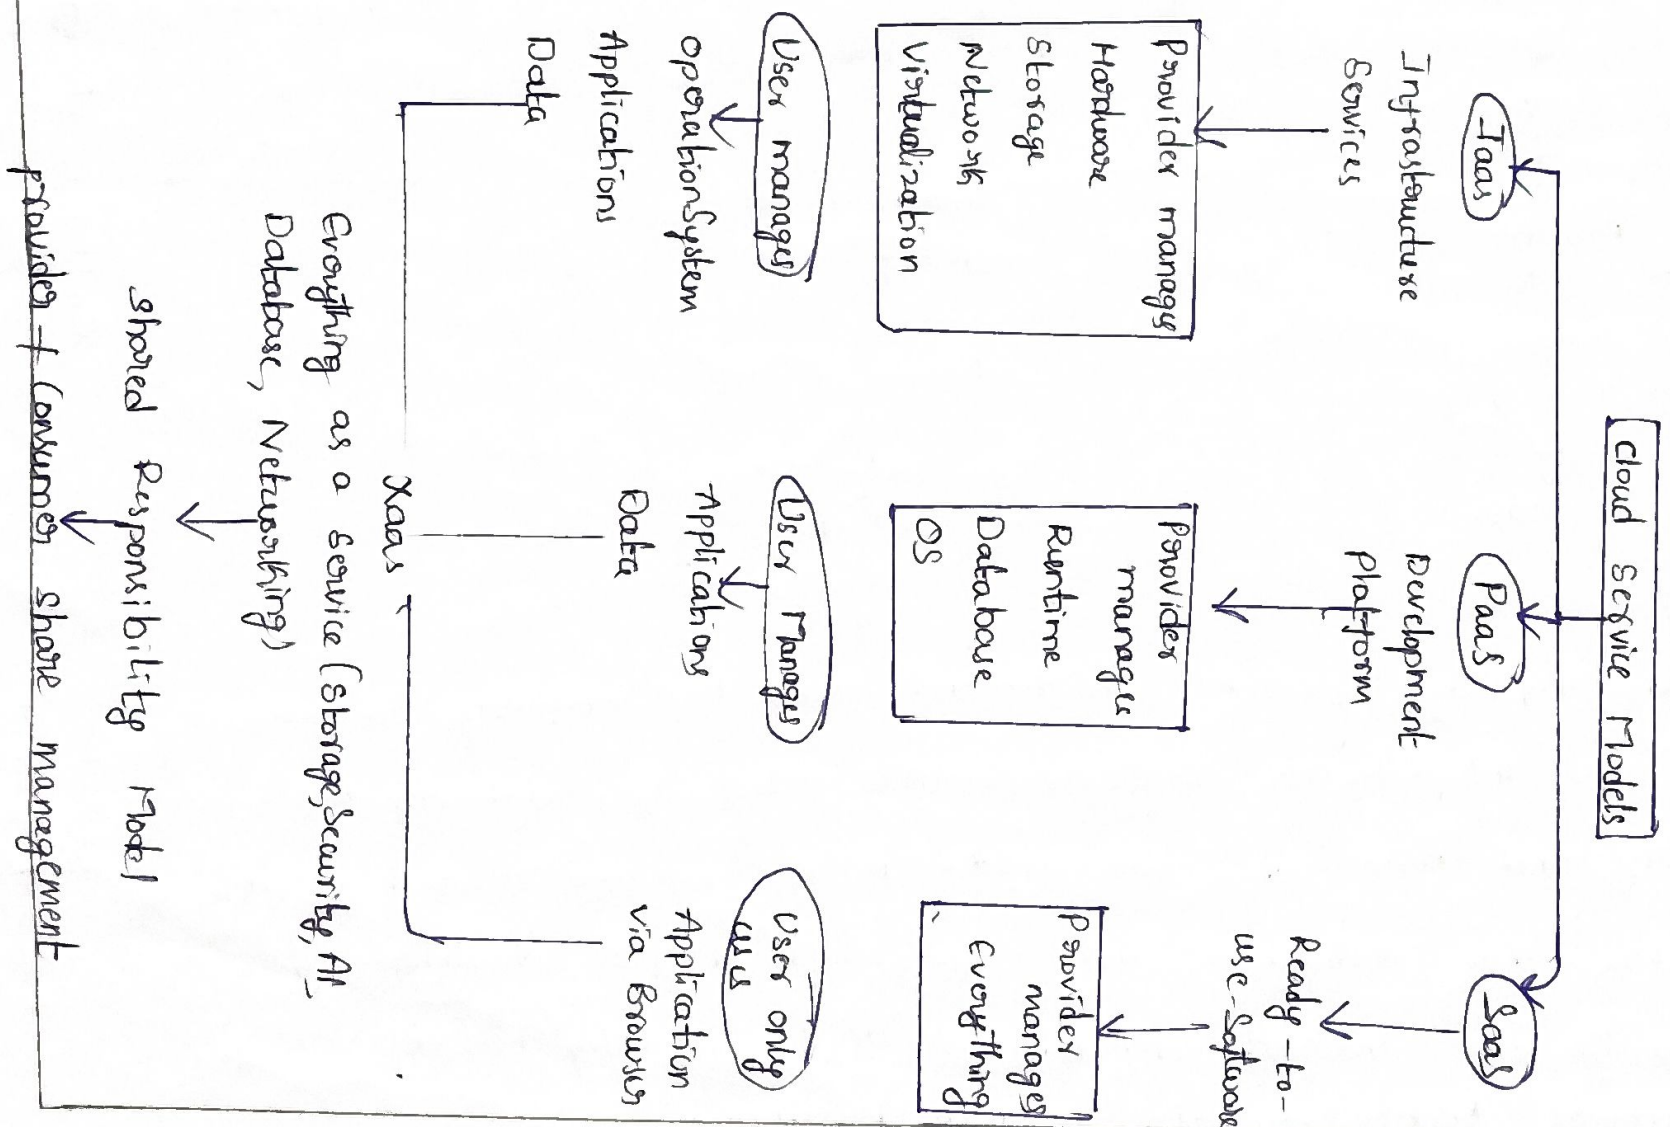

Cloud computing provides on-demand access to computing resources over the Internet. Its features such as elasticity, scalability, resource pooling, and measured service make it a cost-effective and flexible solution for individuals and organizations. Despite challenges like security and Internet dependency, cloud computing has become an essential technology for modern business.

Evolution of Cloud Computing

Cloud Service Models

Virtualization and Web Services as Enablers of Cloud

Virtualization and web services are the foundation of cloud computing. Virtualization improves resource utilization by creating virtual machines, while web services enable seamless communication between cloud applications through APIs.
